

### Amount of power generated(5/1~5/31)

Starting from May 22, we have changed our facility operation by extending the lighting time of LED lights during the night in order to reduce the duration of storage battery being fully charged. As such, the amount of power that appeared to be generated has increased (the amount of power charged to the storage battery is deemed as the amount of power generated).

Total amount of power generated from 5/1 to 5/31 **39.63** kWh
