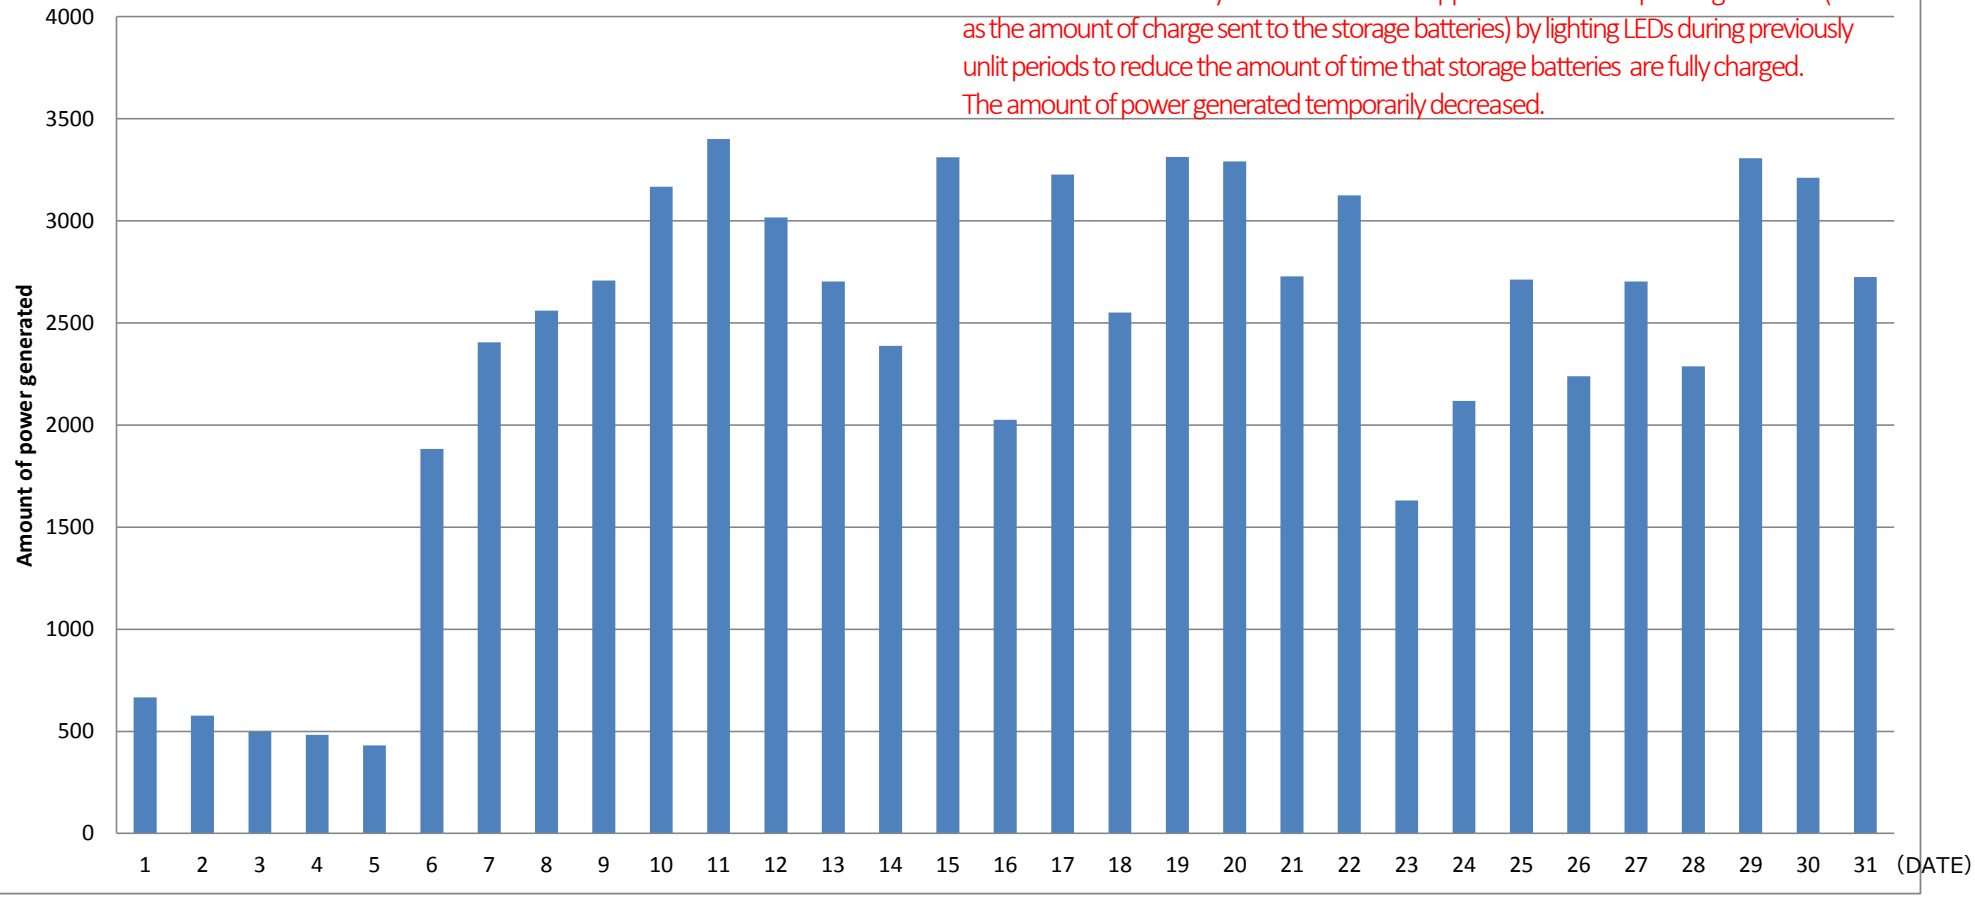
Amount of power generated（Aug.1～Aug.31）



On Aug.5, we introduced a system that lights up LEDs based on residual battery capacity.
The introduction of this system increased the apparent amount of power generated (defined as the amount of charge sent to the storage batteries) by lighting LEDs during previously unlit periods to reduce the amount of time that storage batteries are fully charged.
The amount of power generated temporarily decreased.

Total amount of power generated from Aug.1 to Aug.31 **73.39** **kWh**

Weather from Aug.1 to Aug.31
